

Forcing the JO App closed on iOS

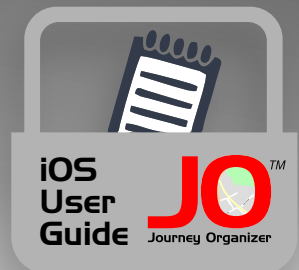

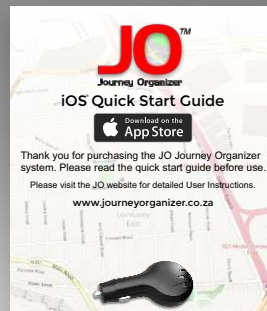

If you force close the JO App on iOS (Apple) then the App will be completely closed and will not be able to connect to JO. The JO will continue to record trips as normal and the next time the JO App is open in your vehicle with the ignition 'on' it will sync the trip data via Bluetooth. For the best system operation it is best not to force close the JO App.

Force-Closing is done by double-clicking the center iPhone button (iPhone 8 or earlier), swiping up from the bottom edge of the screen (iPhone X).
